

FAST CERTIFIED RESULTS YOU CAN COUNT ON

Radiation Solutions offers leak test & analysis services to support NRC regulatory criteria at the frequency defined by the manufacturer and as noted in your Radioactive Materials License. We use certified laboratory low-level counting equipment that are efficiency checked and accompanied by a current background count to ensure meeting the detection sensitivity of 185 becquerels (0.005 microcuries).

Samples sent to our company laboratory are analyzed and returned within five business days following their arrival. Certificates with the results are emailed back to the sender by email. Anytime there is an actionable level detected, Radiation Solutions will immediately notify the sender. All certificates are stored on our local company server and backed up by a backup cloud service so they are always available and easily retrieved should you require another copy.

SAMPLE KIT & ANALYSIS

Radiation Solutions offers convenient sample kits that can be shipped to you to perform the sample collection. Each kit includes the swipes, instructions, and a pre-addressed envelope for your convenience.

Pricing is dependent upon the quantity per the schedule shown.

When ordering, please specify the Leak Test Kit part number along with the quantity as follows:

- Portable Nuclear Density & Moisture Gauge (RS-001)
- Fixed Nuclear Density Gauge (RS-002)

AUTOMATIC REPEAT SERVICE

Radiation Solutions can automatically resend you Samples Kits to meet your currency criteria. Simply sign our 5 year contract and receive another 10% savings on top of those identified on our pricing schedule. Once subscribed, we will send you the kits so you receive them one full month before the due date to allow sufficient time for sampling, shipping, analysis and returning the results. This hassle free service saves you money, locks in the pricing, and saves you your most valuable asset, your time, so sign up now.
